Valeria One

Your Business Agent closes the chat. Valeria One runs the business behind it.

An open-source back office for any business, in any country, on any channel — built to live inside Meta.

Created by Tadewan Pascua · Mérida, México

For millions of small businesses, a Facebook page is the website and WhatsApp is the front desk.

LOST

“Precio?” comments and DMs get buried. Nobody answers in time.

FORGOTTEN

No customer list, no reminders, no follow-up next month.

UNOWNED

Quotes, payments and bookings live on paper — or nowhere.

The tools that solve this are priced and built for companies with staff and consultants. A salon in Mérida or a repair shop in Manila gives up.

Valeria One is the whole office behind the chat

One inbox

WhatsApp, Messenger, Instagram, SMS, email, website

Customers

One record per person, pipeline in the trade's words, teams

Booking

In the chat and on a page; Google Calendar both ways

AI replies

The business's own key, only its facts, hands off when unsure

Quotes

Signed on the phone, fingerprinted, the country's tax

Payments

The business's own Stripe, Mercado Pago, PayMongo, Razorpay...

Follow-ups

Reminders, thank-yous, campaigns to people who agreed

Website

For businesses that only have a Facebook page

Built on the Meta platform, as a Tech Provider

Meta surface	What Valeria One does with it
WhatsApp Embedded Signup	A business connects its own number in Meta’s own window
Facebook Login for Business	Pages and Instagram in one step; one signed webhook routed to each business
Lead Ads	Every lead becomes a customer, matched, never duplicated
Page and Instagram comments	“Precio?” gets one private answer, under Meta’s one-reply rule
WhatsApp interactive lists	Book service, day and time without leaving the chat

Any country, any trade, any language — by configuration

Country	Tax	First channel	Payments
México	IVA 16%	WhatsApp	Mercado Pago, transfer
Philippines	VAT 12%	Messenger, Viber	PayMongo (GCash, Maya)
Brasil	external	WhatsApp	Mercado Pago (Pix)
India	GST 18%	WhatsApp	Razorpay (UPI)
Nigeria	VAT 7.5%	WhatsApp	Paystack
United States	sales tax (external)	SMS	Stripe

12 country packs

9 industry packs

11 languages, incl. right-to-left Arabic

Meta’s rules, and each country’s, are enforced in code

A business assistant, never a general chatbot

The AI answers only from the business’s services, prices and hours; declines anything else; hands upset or unsure chats to a person.

The 24-hour window

Free-form replies only inside it; outside it, the business’s approved template — or nothing.

Consent and quiet hours

Promotions need recorded consent; quiet hours move them to the next allowed hour; STOP stops everything.

Privacy by design

One business never sees another; secrets encrypted; customer erasure wipes their data and message text.

Why it is a win for Meta

More conversations

Reminders, follow-ups, quotes, payment links and campaigns are business-initiated conversations on WhatsApp and Messenger.

The whole lifecycle stays on Meta

Not just the first message: the booking, the quote, the payment, the next visit.

The long tail, everywhere

The same product for a salon in Mérida, a repair shop in Manila, a gym in Lagos.

It makes Business Agent stronger

Meta’s agent answers; Valeria One remembers, books, quotes, charges and follows up.

How it slots into Meta Business

IN

Channel adapters

WhatsApp, Messenger, Instagram, SMS (any provider), email, Telegram, website, any webhook. The core never knows the pipe.

CORE

Separate blocks

Customers, inbox, booking, quotes, payments, follow-ups, AI, website — each with its own API and tests.

OUT

API and webhooks

A public API with keys; every event out, signed, from a transactional outbox with retries.

Python · FastAPI · PostgreSQL · one Docker command to run · open source under AGPL-3.0, commercial licence from the author.

It is built. Try it now.

Live sandbox
Fake businesses in 9 countries; nothing real is ever sent

sandbox.valai.mx

Booking and website demo
What a customer sees on their phone

THE ASK

Bring Valeria One into Meta Business — keep its name — and work with the person who built it.

Adoption, partnership or licence: open to the shape that gets it to the most businesses.
